Enhancement

I modified the board since it wasn't working properly for me, I added a row of peg, and made the structure more stable.

Introduction

The Galton board, also known as the Galton box or quincunx or bean machine, is a device invented by Sir Francis Galton.

The Galton board consists of a vertical board with interleaved rows of pegs. Beads are dropped from the top and, when the device is level, bounce either left or right as they hit the pegs. Eventually they are collected into bins at the bottom, where the height of bead columns accumulated in the bins approximate a [bell curve](#)↗. (taken from https://en.wikipedia.org/wiki/Galton_board↗).

Finished model in action: https://www.youtube.com/shorts/i-hbnG_IKyI↗

What do you need:

- 6 M2.5 + nuts and washers.
- a 2mm thick plexiglass pane to cover the board (~ 125mm x 81mm). You could also use thicker or thinner panes, but then you should adjust the height of the lid accordingly. I used a 1.2 mm thick plexiglass, and inserted some support, it's up to the availability of the materials.

- 3000/3500 stainless steel balls with a diameter of 1mm (i bought

Instructions for Assembling the 3D Printed Galton Board

1. **Insert Pins:** Place the pins into the designated slots on the base.
2. **Add Balls:** Insert the balls into the top of the Galton Board.
3. **Cover with Plexiglass:** Secure the setup with the plexiglass cover.
4. **Attach Frame:**
 - If using a 1.2 mm thick plexiglass, insert blocks between the plexiglass and supports.
5. **Secure with Screws:** Fasten everything together by tightening the screws.

For the support:

1. **Attach Screws:** Insert the screws through the side holes, followed by washers and nuts.
2. **Trim Screws:** Use screws at least 20 mm long and cut them to the necessary length.

Enjoy your fully assembled Galton Board!

If you need any support don't hesitate to contact me.
